

IMOW®, IMOW® EVO

6 new iMOW® robotic mowers for lawns up to 5000 m². A complete re-development of the STIHL range with new and improved hardware, software and install method. New iMOW®s have already been available for 12 months in France, Germany and Benelux, receiving excellent feedback.

KEY FEATURES

New cutting system. 3 free-swinging blades produce an excellent finish, are long lasting and easy to replace.

Ultrasonic sensors. iMOW® slows down before lightly touching obstacles for reduced impacts.

All new MY iMOW® App. Allows for simple and intuitive setup and operation, no need to change settings on the iMOW® itself.

Voice output. iMOW® can give a verbal status at any time for fast information, without the need for a smartphone.

Improved drive home procedure. Guide wires in the centre of the lawn speed up the docking process and allow for zone management.

Improved connectivity. Both models can be linked to the user's smartphone via Bluetooth or Wi-Fi.

Electronic height adjustment. 17 stages between 20-60 mm, controlled via the MY iMOW® App.

Reliable anti-stuck manoeuvre. Able to consistently free itself from challenging obstacles such as branches and items left on the lawn.

Rain sensor. Control the sensitivity of the rain sensor in the MY iMOW® App.

Suitable for more complex gardens. Like the existing range, corridors, secondary areas, starting points and external docks can be installed with the help of the install guide provided with each iMOW®.

Wide choice of new accessories. Including biodegradable pegs, a wall mount and spare blade kits.

EVO ONLY FEATURES

LED Matrix. A screen on the hood showing simple symbols that indicate the iMOW®s state - whether that's mowing, travelling home or charging.

Dark grey exterior. Non-EVO models are white.

Mobile network connectivity. As well as via Bluetooth and Wi-Fi, Evo models can be connected remotely via the mobile network.

Faster maximum drive speed. This increases the cutting efficiency and reduces the required total active time

45% slope compatibility. 5% higher than non-EVO models. Evo models can also be used with Upgrade Kit 10 which contains traction wheels and weights that allow up to 60% climbing ability.
